

Tablets Processing Flow Chart

Tablets Production

01

FORMULATION

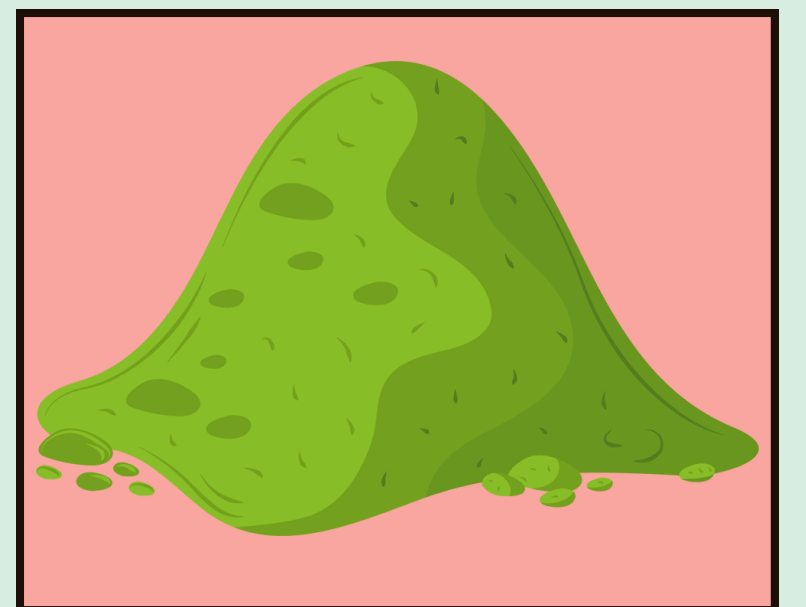

This procedure is the initial step of tablets processing. Experts create the perfect mix of ingredients to make the tablets effective and reliable, shown through a careful arrangement of different ingredients.

02

GRINDING

Grinding is the initial step in tablet production, where raw materials are transformed into uniform powder to improve their flow and compression quality.

BLENDING

03

To achieve consistent tablet potency and quality, the second stage involves blending granules, active pharmaceutical components and excipients to ensure a homogenous mixture.

04

PACKAGING

Tablets are safely packaged in blisters, bottles and other forms to ensure safety, precise dosage and compatibility for a variety of distribution method.
